

Ph.D. WINTER SCHOOL

of the Italian Society of Agricultural Chemistry

Current challenges in agricultural ecosystems: the need for a multidisciplinary approach

Piacenza, Italy, 13-16 February 2017

School aims

The incoming edition of the Ph.D. winter school of the Italian Society of Agricultural Chemistry is to promote scientific knowledge in a friendly environment, bringing together Ph.D. students and young scientists.

The School will be featured in base lectures regarding agricultural ecosystems, sustainable production systems and environmental changes in agricultural ecosystems. A further session will be devoted to new methods to study agricultural ecosystems, including -omic technologies.

Besides base lectures, the school will include practical sessions (metabolomic platform, rhizosphere experiments, high CO₂ experiments).

Venue & costs

The school will be held at the Università Cattolica del Sacro Cuore, Campus of Piacenza (<http://www.unicatt.it>). Information on costs and a detailed programme will be issued soon.
