

**Laura Zanin** is a researcher in plant nutrition (AGR13) at Department of Agricultural, Food, Environmental and Animal Sciences at the University of Udine. She obtained her PhD in Agriculture Science and Biotechnology (2013) at the University of Udine. Her scientific activity mainly focuses on the study of nutrient acquisition with special emphasis on the interactions among nutritional pathways in plants. She is also investigating plant-soil relationship with respect to the plant-induced modifications of rhizospheric environment, the role of natural effectors (e.g. humic substances), the mechanisms of root exudation and their impact on rhizosphere biochemistry and microbiology by using chemical, biochemical, molecular and biotechnological approaches.

**Info recapito:**

Laura Zanin, PhD

Department of Agricultural, Food, Environmental and Animal Sciences, University of Udine

Via delle Scienze, 206 - 33100 - Udine, Italy
